Hiring Team & AI Engineering Leadership

Apex Financial Intelligence

Application for: Senior Full-Stack & AI Solutions Engineer

Dear Apex Financial Intelligence Team,

I am writing to apply for the **Senior Full-Stack & AI Solutions Engineer** role at Apex Financial Intelligence. With 10 years of software engineering experience bridging high-performance backend systems (**C# / .NET Core, Python**), modern reactive frontend web applications (**React, Next.js, TypeScript**), and production **Applied AI / LLM Engineering**, I am thrilled by Apex's vision of revolutionizing accounting workflows through generative AI and intelligent automation.

Throughout my career, I have focused on solving real-world domain challenges by coupling robust software architecture with machine learning capabilities. In my recent work, I spearheaded the design and rollout of an intelligent financial transaction classification pipeline that directly addressed the accuracy and cost bottlenecks typical of LLM integrations:

- **Two-Tier Hybrid AI Classification Architecture:** Designed a confidence-routed categorization engine using **Azure AI / Azure Foundry** and OpenAI LLMs. Tier 1 performs rapid candidate ranking with confidence scoring, while Tier 2 dynamically triggers granular few-shot prompts or fine-tuned transformer models for ambiguous inputs.
- **Measurable AI Performance:** Boosted transaction categorization accuracy from a **68% single-prompt baseline to over 94%**, while reducing overall LLM API token consumption and costs by **65%** and decreasing inference latency by **50%** for high-confidence transactions.
- **Model Evaluation & Data Engineering:** Curated and benchmarked a dataset of **50,000+ transactions** across 40+ accounting categories, exploring transformer fine-tuning with **BERT, DeBERTa, and SetFit**.
- **Modern Full-Stack Execution:** Built intuitive analytics dashboards using **React, Next.js, and TypeScript**, integrated with resilient **ASP.NET Core REST APIs** and SQL/NoSQL datastores.
- **Cross-Platform Mobile:** Developed the **Together** relationship mobile app using **React Native and Firebase**, reaching **5,000+ active users with a 4.8★ Play Store rating**.

I hold an **Azure Solutions Architect Expert (AZ-305)** certification alongside deep practical experience in RAG pipelines, prompt engineering, structured JSON validation, and automated CI/CD deployment. I thrive in collaborative environments where engineering craftsmanship and pragmatic AI solutions deliver immediate business value.

I would be delighted to discuss how my full-stack expertise and hands-on AI engineering experience can accelerate Apex Financial Intelligence's product roadmap. Thank you for your review and consideration.

Sincerely,

Naveed Ahmed Khan

Senior Full-Stack & AI Solutions Engineer
