Hiring Team & Engineering Leadership

HealthBridge Cloud Technologies

Application for: Lead .NET & Cloud Solutions Architect

Dear HealthBridge Hiring Team,

I am writing to express my enthusiastic interest in the **Lead .NET & Cloud Solutions Architect** position at HealthBridge Cloud Technologies. With 10 years of software engineering and technical leadership experience specializing in **C#, .NET 8 / ASP.NET Core**, enterprise **Microsoft Azure** architectures, and **legacy-to-cloud SaaS modernizations**, I have dedicated my career to designing high-availability systems that scale securely in regulated domains. HealthBridge's mission to modernize enterprise healthcare platforms into next-generation, multi-tenant cloud ecosystems directly aligns with my hands-on architectural experience.

In my current role as **Technical Lead / Lead Software Engineer** at a HealthTech & Cloud SaaS enterprise, I have led a cross-functional squad of 8-10 engineers (including 6 direct developer reports) through the end-to-end architectural modernization of a legacy desktop healthcare application into an event-driven, multi-tenant SaaS platform on Microsoft Azure. Key milestones from this initiative include:

- **Scalable Cloud Architecture:** Architected microservices on Azure utilizing **ASP.NET Core Web API**, **Azure Functions**, **Azure Service Bus** (Queues/Topics), and **API Management**, expanding platform capacity to **15,000+ active healthcare personnel across 120+ facilities** nationwide.
- **Performance & Latency Optimization:** Decreased API response latency by **45%** and tuned SQL Server database queries to support high concurrency under HIPAA-compliant multi-tenant isolation.
- **Containerization & CI/CD Acceleration:** Spearheaded containerization using **Docker and Kubernetes (AKS)**, establishing automated GitLab/GitHub Actions CI/CD pipelines that reduced release cycle times from **hours to under 15 minutes** with zero downtime.
- **Cost Reduction:** Achieved a **30% reduction in cloud infrastructure spend** through dynamic auto-scaling and resource rightsizing.

As an active holder of the **Microsoft Certified: Azure Solutions Architect Expert (AZ-305)** and **Certified Kubernetes Application Developer (CKAD)** credentials, I combine deep technical rigor with pragmatic engineering governance. I take great pride in mentoring engineers, conducting constructive code and architecture reviews, authoring Architectural Decision Records (ADRs), and collaborating closely with product leadership and executive clients to deliver software predictably.

I welcome the opportunity to discuss how my background in .NET cloud architecture, legacy modernization, and engineering leadership can help HealthBridge achieve its technical and business milestones. Thank you for your time and consideration.

Warm regards,

Naveed Ahmed Khan

Lead .NET & Cloud Solutions Architect
